Report DMCA / Copyright. DOWNLOAD FILE.4.1 to 4.5 The 4.1 to 4.5 group consists of mouthrinses that may result in stomatitis. They include all ketoconazole products available to consumers (including rinses) and are popular, mainly because ketoconazole provides better protection against thrush than most mouthrinses. Glossary Antifungal Antifungal agents A class of drugs that prevent the growth and spread of fungi (molds). They may be applied topically (on the skin or other parts of the body), taken by mouth or inserted into the vagina. Antiseptic A substance that is applied on the skin or in the mouth to kill microbes. A P1-like repetitive DNA and an isolated repetitive sequence are located at chromosome 5q10.5. The cloning and the physical mapping of a 7 centiMorgan (cM) DNA fragment located at 5q11-q13.3 has been described by Aloush et al. (1992). In the present study, we demonstrated the presence of a P1-related repetitive element present at this locus. This element may be considered a candidate for the isolation of a new translocation breakpoint. A second repetitive sequence, located 3 kilobases (kb) downstream from the 7 cM P1-like DNA fragment and named H5, was also cloned, sequenced and physical mapped. H5 is composed of a 135 bp tandem
